

Impetus4Change Insider: On your marks, get set...Roadshow!

Summer is just around the corner...For many, this means sunshine and a holiday break, but for cities around the world, it also means bracing for the impacts of heatwaves, urban heat islands, cloudbursts and other climate extremes.

For this summer newsletter, I4C has you covered on project updates and upcoming events, including:

- The launch of the I4C #MakeItReal Roadshow
- Takeaways from the I4C General Assembly in Prague
- A new video series featuring 'I4C Changemakers'
- ...and more!

LATEST NEWS

I4C Roadshow becomes a reality at ECCA 2025

We're excited to announce that the I4C Roadshow successfully launched at ECCA 2025 in Rimini! The event marked a dynamic start to our journey, with fruitful exchanges (and even games) among participants and I4C scientists. Want to know more about the highlights and what's next?

UPCOMING EVENTS

ICUC12 – 12th International Conference on Urban Climate

7-11 July 2025, Rotterdam, the Netherlands

The 12th International Conference on Urban Climate (ICUC12) will be hosted by the International Association for Urban Climate (IAUC) and the American Meteorological Society (AMS) later this month.

Bringing together researchers, practitioners and policymakers worldwide, ICUC12 is a hub for cutting-edge insights on urban climate challenges and solutions. This year's theme, 'Heritage as an Urban Climate Challenge', explores how climate impacts our built

environment and how cities can adapt while preserving their cultural and architectural legacy.

Stay tuned for further updates!

Understanding and Predicting Annual to Multi-Decadal Climate Variation

18-20 November 2025, Bologna, Italy

I4C is co-organising this workshop together with the Horizon Europe projects ASPECT and EXPECT, as well as the WCRP's DCPD and EPESC groups. The event will not only advance scientific understanding of climate predictability but also provide an opportunity to strengthen collaboration across key initiatives working to improve confidence in climate predictions and projections.

In an era marked by escalating climate extremes and unprecedented weather anomalies, the need for reliable climate predictions across multiple timescales is greater than ever. The event invites contributions on a wide range of topics, including prediction skill assessments, the role of external forcings, mechanisms behind predictability, climate extremes, integrated attribution, and innovative approaches such as explainable AI and machine learning.

Interested? Submit an abstract by 15 July 2025!
